North American region
- 18,000 years

This map illustrates the North American region 18,000 years ago. The landmass is predominantly covered by a vast, white area representing the Laurentide Ice Sheet, which extends from the Arctic region down to the Gulf of Mexico. The ice sheet is bordered by a thin line of green and yellow, indicating the ice margin. The surrounding oceans are depicted in shades of blue. The map shows the ice sheet covering most of the continent, with only a few small, isolated landmasses visible.

Not sure?

As with a number of other topics of paramount significance, you may want to ask a world-renowned expert on the universal consensus ¹.

¹ For other equally notable consensual persuasions, such as theological, you may want to approach either His Holiness the Supreme Pontiff of the Universal Church, Bishop of Rome, and Vicar of Jesus Christ, or the Respected Comrade, General Secretary of the Workers' Party, and President of the State Affairs Commission of the Democratic People's Republic of North Korea
